

Design Document

1. Project Description

This personal website serves as a professional portfolio and introduction page for Jiahui Zhou, a Computer Science Master's student at Northeastern University. The website showcases personal background, technical skills, academic projects, and hobbies. It is designed to be clean, modern, and accessible, using Bootstrap 5 for responsive layout and glass morphism design principles for a contemporary aesthetic.

2. Key Features

- Responsive navigation
- Professional profile showcase
- Skills and education sections
- Project portfolio display
- Personal hobbies section
- Contact information and social links

3. User Personas

Persona 1: Potential Employer

Goals:

- Quickly understand candidate's technical background
- Review projects and skills
- Assess communication and presentation skills
- Find contact information easily

How the website addresses these:

- Clear navigation and organized sections
- Project showcase with descriptions
- Easy-to-scan skills section
- Direct contact links

Persona 2: Classmate

Goals:

- Learn about peer's background and interests
- Find potential collaboration opportunities
- Connect on social platforms

How the website addresses these:

- Personal introduction section

- Hobbies and interests display
- Social media links
- Project details for technical discussion

Persona 3: Visitor / Friend

Goals:

- Learn about the person
- See personal interests and hobbies
- Understand what they're studying/working on
- Find ways to connect

How the website addresses these:

- Brief self introduction
- Hobbies section for personal connection
- Direct social links

4. User Stories

Story 1: The Recruiter

As a technical recruiter, I want to quickly scan a candidate's skills and projects, so that I can determine if they're a good fit for an open position.

Scenario:

Alex, a recruiter at a tech company, receives a link to this personal website. She opens it on her laptop during a busy day. She immediately sees a clean, professional layout with clear sections. She clicks on "Projects" and sees detailed descriptions of technical projects. Within 2 minutes, she has a good understanding of the candidate's technical abilities and can make an informed decision.

Story 2: The Classmate

As a fellow student, I want to learn about a classmate's background and find ways to connect, so that we can potentially collaborate on projects or study together.

Scenario:

Lily, a classmate in a CS course, sees Jiahui's website link in a class discussion. Curious about her background, Lily visits the site. She read the personal introduction, learn about Jiahui's non-traditional CS background, and see shared interests in hobbies. Alex finds the LinkedIn link and sends a connection request, leading to a study group collaboration.

Story 3: The Social Connector

As a visitor, I want to quickly find social media links, so that I can connect on professional or social platforms.

Scenario:

Gloria visits the website and is impressed by the design. She wants to connect on LinkedIn and GitHub. She immediately sees social icons in the profile section and contact section. One click takes her to the respective profiles.
